

Preventive ⁺ Maintenance

Stay Ahead of Equipment Problems

Our preventive maintenance services help detect issues early, avoid costly repairs, and keep your equipment operating at peak performance.

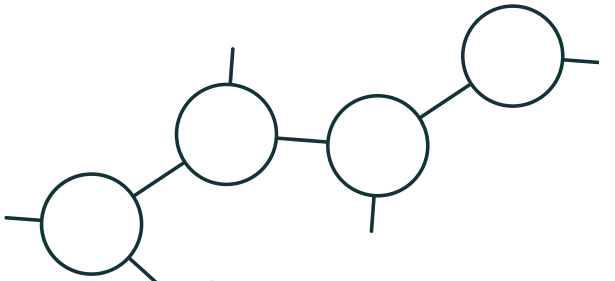

Preventive maintenance (PM) of medical equipment is done to keep devices safe, accurate, and reliable before problems happen—rather than fixing them after they break.

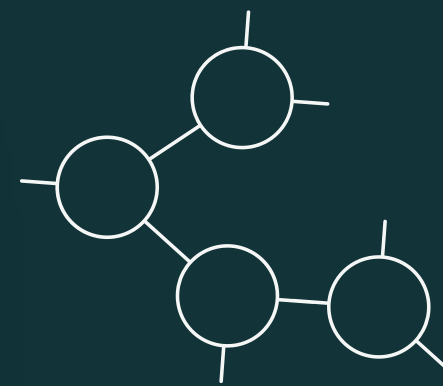

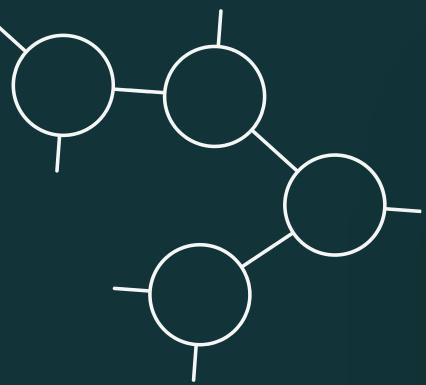

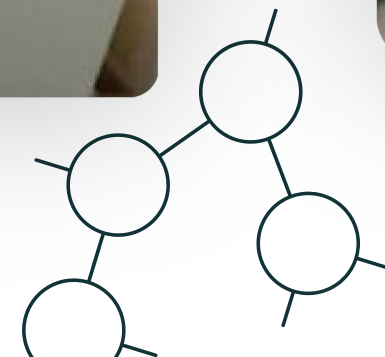

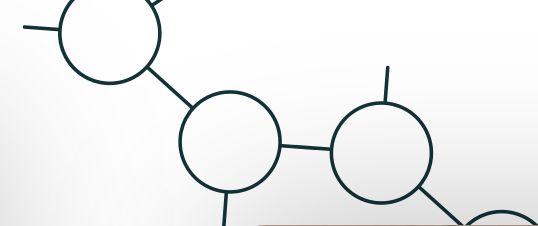

Here is the main reasons why it's needed:

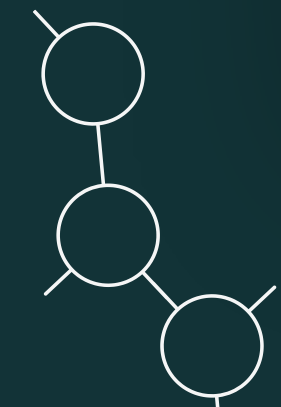

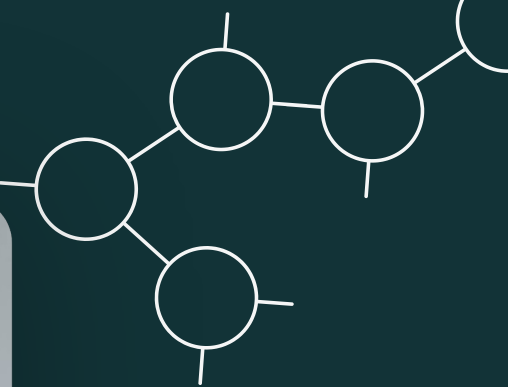

Preventive maintenance of medical equipment is done to ensure safety, accuracy, and reliability before failures occur. It helps prevent unexpected breakdowns, maintains proper performance, extends equipment lifespan, and ensures compliance with healthcare standards. Overall, it supports safe and effective patient care while reducing repair costs and downtime.

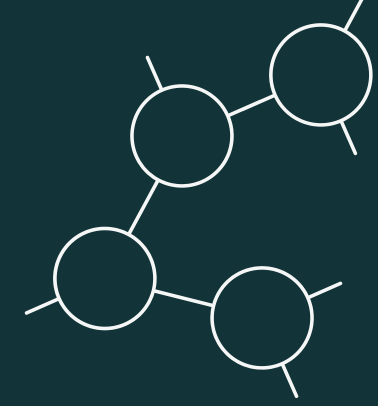

NabuaMed is made up of trained biomedical engineers and technicians who specialize in medical equipment repair, calibration, and maintenance, ensuring your devices are properly serviced according to technical standards.

NabuaMed also emphasizes cost-effective service and reduced downtime, helping hospitals avoid unexpected breakdowns and expensive emergency repairs.
